application specialist at First Call Computer Solutions. In this video, I will show you how to set up your voicemail greetings for your Allworx Verge IP Phone. For this demonstration, I will be using a 9312 Allworx Verge IP Phone, but please keep in mind that this process will be the same for anyone using the Allworx Verge IP Phone models. 9312 Allworx Verge IP Phone Now, Allworx offers you the ability to record a different voicemail greeting for each one of your phone's different presence settings. This means that you may record up to 9 different voicemail greetings that will each play depending on whichever presence your phone is set to at the time. In order to change your voicemail greetings, you will need to get into your message center and listen to your voicemail's Auto-attendant prompts. Here is an overview of the process First, double-tap the voicemail button on your phone. Then, enter in your PIN followed by the pound sign. If you are unsure what your PIN is, then please contact your superior for assistance. Next, Select 4 to change your message center system setting. Then, choose option 3 to manage your greeting. Next, select whichever greeting you wish to change. At a minimum, you must set up your default greeting which is option 0. Select 1 to change the recording, and then record your greeting. You may then press 1 to save it, 2 to review it, or 3 to change it again. When you are finished recording you may either hang up your phone or press pound to select the next voicemail greeting that you'd like to change. Now, If I wanted to go back and record a different voicemail greeting for a presence setting, I'd press pound. Otherwise, I may hang up my phone! This concludes our training video about how to set up your voicemail greetings. I hope that this video was helpful to you. Thank you for viewing! The following Allworx video offers an overview of the various Allworx applications that are available. These applications include Reach, Interact and Interact Professional, and View. Below the video, you will find the video's transcript. Official Allworx video describing the different applications that they have available that go with their Allworx phone systems. Welcome to Allworx! Sit back and let us tell you a little bit about our products. In this video, we will talk about the Allworx applications, which includes, Our Reach Application – that extends the rich functionality of your Allworx Voice Over IP communication system right to your iOS and Android devices Our Interact Application – for ultimate call control dashboard, combining the ease of a PC based interface with the high voice quality of the Allworx phones And the View Application – that delivers comprehensive historical call activity reports to help you track metrics that drive your business performance. Our Reach application extends the rich functionality of the Allworx Voice Over IP communication right to your iOS and Android devices. It works on both cellular and Wi-Fi networks. And it is a per-user licensed application that is available for purchase in 1, 5, 10, 30, and 50 user increments. But there is good news! Each Allworx server comes with one free license for you to try! Shown here is the Reach application on an iPad and a Samsung smartphone. You can easily manage active calls with a single touch, such as Park, Hold, Transfer, and Mute. Image from the Allworx Applications Overview video showing the different active call options available through the Reach application. Additionally, the Reach application uses icons to navigate throughout the application to view the status of a call or user and to manage calls. Image from the Allworx Applications Overview video showing the call status and to manage the call through the Reach application. Use the application tabs to access your call history, voicemail, contacts, and settings screens. The Reach application is really helpful to, Road ninjas who always want to be within reach of their business numbers Legal and health care professional who need to be reachable without giving out their personal mobile number Employees who work in a distributed work area such as car dealerships, retail showrooms, and schools. The Reach application has additional features, The Reach Link feature keeps active calls connected as the mobile data network changes, whether from a Wi-Fi network to a cellular data network or vice versa. This feature plays both tones and explanations to the other party during network interruptions and provides recover methods for calls that cannot be reached. The Reach Extend feature enables users to place or receive calls through a cell phone network instead of depending on voice over IP call quality over Wi-Fi and 4G data networks while presenting a business. Caller ID to Remote Parties. This feature requires a cellular voice number configured on the Reach handset. The Call Handoff feature migrates a network call from the Reach handset to the Verge phone during an active call and vice versa. During the call handoff operation, the active call receives minimal disruption to the audio. The Reach Remote Control feature enables users to have full feature control of the Verge phone from a Reach device at or away from the user's desk. If using a tablet, the Reach device enables a desk phone to serve as an executive phone. Emergency Notifications enables users to receive alerts when anyone on the Allworx system dials an emergency call (for example: 911) with unique audible indications on all Reach devices. Push Notifications optimize battery life and receive notifications of incoming calls while the Reach app is running in the background. Wipe Current Remote Licenses enables the Allworx administrator to remove all login credentials and voicemail information for a lost or stolen remote device. Additionally, this feature disables the device from sending or receiving Reach phone calls. Image from the Allworx Applications Overview video describing the Reach link, Reach Extend, Call Handoff, and Reach Remote Control. Image from the Allworx Applications Overview video describing the Emergency Notifications, Push Notifications and Wipe Current Remote Licenses. At Allworx, we offer you the Interact or the Interact Professional application. What is the difference between these applications? Our Interact application displays the inbound caller's name and number in a discreet popup and allows users to view and answer incoming calls from the PC. The application is free and available to any Allworx user. The application screen displays multiple active windows for current calls, parked calls, call history, dial pad, contacts, and more; all of which are easily customizable. And the Interact Professional application offers users a call recording feature. Our Interact Professional application is a per-user licensed application that is available to purchase in 1, 5, 10, 30, and 50 user increments. Good news again! —each Allworx server comes with one free Interact Professional License for you to try. Image from the Allworx Applications Overview video describing the differences between the Interact and Interact Professional applications. Shown here is the Interact Professional application with some of the windows pinned open. With the Interact Professional application, you can customize the main screen and each window as often as you want, showing or hiding specific windows as well and undocking and docking the application windows. You can easily undock each window to move it to a new location on your computer screen and or resize the window. And, if you want, you dock this window back into the application main screen. Do you only need to see a few windows? Go ahead and select which windows to show or hide. Image from the Allworx Applications Overview video showing the Interact Professional Application. As you can see on the computer screen, the Interact Professional application uses the same icons and color-coding as the Verge phones and the Reach application. Some window examples include: Dial Pad Window – to enter and dial a phone number Call History Window – to locate calls and quickly see the call answered status Contacts Window – to double click to place a call or to quickly scan other Allworx user's presence and status to see who is busy Current Calls Window – that displays the call information just like the Verge phones and the Reach application as well as provides one-click Hold, Transfer, Park, and more Parked Calls Window – that displays the calls placed into one or more of the available parking orbits Or the Agent Window – so your call center agents can quickly log into or out of their queues. Image from the Allworx Applications Overview video describing the different windows available in the Interact Professional Application. The Interact Professional application is really helpful to: Front Desk Service Staff and Receptionists Call Center Agents who are using the Allworx Automatic Call Distribution (ACD) feature Sales Professionals who depend on outbound or inbound calls to drive revenue And anyone who relies on Microsoft productivity tools to manage their day to day workflow. Image from the Allworx Applications Overview video describing the popular work roles that may benefit from using the Interact Professional Application. The Interact Professional application comes with the Interact Sync plugin. The Interact Sync feature enables, Intelligently syncing your presence and status across Skype for Business (Lync), Outlook and Allworx; and automatically updates the Allworx call routes And making one-click calls using Allworx from: Skype for Business Outlook And websites on Google Chrome and Mozilla Firefox using Allworx Interact Professional also has an External Program Link feature. This feature ties the Allworx phone into a business's workflow and specifies an action for the Interact Professional application to perform whenever system events occur. Image from the Allworx Applications Overview video describing the Interact Sync plugin and the External Program Link. What are the View and View ACD applications? The View application enables users to create, save, and share call activity reports. There are 6 intuitive call activity report templates with advanced data filters, and you can manage the information shown based on each user's permission level. Users can access the reports and dashboards via any web browser. And you can export the reports to a PDF or CSV file. The View application requires the Allworx View feature key. One Feature key covers all users at one site; therefore, a feature key is required for each Allworx server in a multisite network. The View ACD application enables users the ability to see queues and agent performance in real-time. You can create as many dashboards as you need and customize each dashboard using intuitive graphical charts with many options. The View ADC application requires both the View feature key and the View ACD feature keys. Just like the View feature key, you will need a View ACD feature key for each Allworx server in a multi-site network. Image from the Allworx Applications Overview video describing the differences between the View and the View ACD applications. The Allworx View application helps supervisors and managers make smart data-driven business decisions from anywhere and delivers comprehensive historical call activity reports to help you track metrics that drive your business performance. This is a Call Detail Report. You can click on any record to see the entire call life cycle for a specific call or calls, including trying, ringing, queued, hold, parked, active, transfer, and complete states. Image from the Allworx Applications Overview video showing the View Call Detail Report. The View ACD application provides easy to see graphical charts on customizable dashboards to help everyone stay on top of queue and agent stats in real-time. You can see the agent and queue call activity trends using a variety of graph formats, including line, column, area, and stacked area charts. Image from the Allworx Applications Overview video that points out the graphical charts available in the View ACD application. Use the Single Item Widget to create an enlarged text or a dial graphic that represents a single queue or agent statistics. Image from the Allworx Applications Overview video that points out the Single Item Widget in the View ACD application. And quickly scan agent and queue statistics by adding a color-coded bar chart to correspond to the preconfigured threshold alarm levels. Image from the Allworx Applications Overview video that points out the Agent Queue Statistics section in the View ACD application. The View application is really helpful when: Tracking outbound call volume by individual agents or employees Tracking inbound call volume by geographic areas and time periods to identify customer trends Measuring incoming calls to specific DIDs associated with advertising campaigns Identifying unmet staffing needs and areas to reduce telecom costs. Image from the Allworx Applications Overview video that provides a few examples of when the View and View ACD applications are useful to have. Thanks for taking the time to learn about our products. For more information about any of the Allworx products you have seen, visit www.Allworx.com or contact your local reseller. The following First Call training video offers an overview of how to get logged into the Allworx Reach application on a mobile device. Hello! Welcome to First Call's training video about how to log into your Allworx Reach mobile application! In this video, I will be showing you images of the login process using an iOS device. If you are using an Android, the process will be very similar, just with an Android operating system look and feel. Before we get started, you will first want to locate your IP Address, Allworx username, and password. This information will be provided to you by your Allworx Administrator when setting up the app. If you are missing this information, then please contact your Allworx Administrator. To begin, you will need to download the Reach application, if you have not already done so. You can do this by searching for Allworx Reach in your app store, also known as the Google Play Store on an Android device. Once you have located the Allworx Reach 5 app, select to install the app. Image from the First Call's How to Log In training video that shows how to install the Allworx Reach application. After installing the Reach application, select to open the app. Note: On an Android device, select to launch the app. Image from the First Call's How to Log In training video. The following First Call's How to Log In training video that shows the Notifications pop up. And choose to allow the app to access your microphone. Image from the First Call's How to Log In training video that shows the Microphone pop up. Then, decide if you want to allow the app to access your mobile device's contacts. This is up to you to decide. Typically, if you do not use your personal contacts while working, then you will not want to allow this feature. If you do use your personal contacts for work, then you may want to select "ok" to allow your mobile device's contacts to sync into the app. Image from the First Call's How to Log In training video that shows the Contacts pop up. And finally, read and accept the 911 Notice. Image from the First Call's How to Log In training video that shows the 911 Emergency Notice. Next, the app will ask you to get logged in. Using the IP Address, Username, and Password that was provided to you by your Allworx Administrator, fill out this page, and select "Login." Again, if you do not know your credentials, then please contact your Allworx Administrator. Image from the First Call's How to Log In training video that shows where to enter the IP Address, Username, and Password to log into the Allworx Reach app. And then you will be logged into the app! You will now have the option to answer incoming calls through your application! Please note that you do not need to log in and out of the app every time you wish to use it. Rather, you should remain logged in to the app and use the Go Offline/Go Online buttons to toggle between receiving calls and not receiving calls through the app. For more information about how to toggle the Online/offline settings, please see the First Call training video "Turning the Allworx Reach App On and Off." Image from the First Call's How to Log In training video that shows where to go online and offline in the Allworx Reach app. This concludes our training video about how to get logged into the Allworx Reach application. I hope that this video was helpful to you. Thank you for viewing! The following First Call training video offers an overview of how to turn the Allworx Reach application on and off. Below the video, you will find the video's transcript. First Call training video about how to turn the Allworx Reach application on and off. Hello! Welcome to First Call's training video about how to connect and disconnect your Reach mobile application to your desk phone! In this video, I will be showing you images from an iOS device. If you are using an Android, the process will be very similar, just with an Android operating system look and feel. Before we get started, you will need to make sure that you are already logged into the app. For information about how to get signed into the Allworx Reach application, please see the First Call Allworx Reach training video, "How to log in." Once you get signed into your Reach app, you will start receiving calls through the app, right away. To stop receiving calls through the app, navigate to the Info page. Image from the First Call's Turning the Reach App On & Off training video that shows how to navigate to the Info page. Select "Go Offline" to stop receiving calls through the app. Image from the First Call's Turning the Reach App On & Off training video that shows where the "Go Offline" button is located. Here the app lets you know that you are currently offline and therefore, unable to make or receive calls through the app. Image from the First Call's Turning the Reach App On & Off training video that shows how to tell if the app is online or offline. To allow incoming calls again, tap the "Go Online" button. Image from the First Call's Turning the Reach App On & Off training video that shows how to turn the Reach app back online. And there you have it! This concludes our training video about how to connect and disconnect your Reach app to your desk phone. I hope that this video was helpful to you. Thank you for viewing! The following First Call training video offers an overview of how to place a call using the Allworx Reach application. Below the video, you will find the video's transcript. First Call training video about how to place a call using the Allworx Reach application. Hi there! Welcome to First Call's training video about how to place a call using your Allworx Reach application! In this video, we will cover how to place a call using your Allworx contacts, and how to place a call by dialing a new number. Please note that this video uses the Allworx Reach 5 application version 5.1.4.0 on an iOS device. Other versions of Reach may have a slightly different layout but will still follow this same process. Placing a Call Using Your Contacts When placing a call to someone who is already a saved contact in your Allworx system, start by opening the Allworx Reach application on your mobile device and navigating to the Contacts screen. Depending on the device and version of Reach, you might find this contacts button at the top of your device's screen. Then, search for the contact that you wish to call. You may scroll through all of your contacts, search for the contact's name, or use the filter options to narrow down your search. Then, once you find the contact that you wish to call, click on the phone icon next to their name to place the call! In order to dial a number to call someone through your Reach application, first, navigate to the Phone tab. Then, dial the phone number that you wish to call. If you do not readily see the dial pad on the Phone tab, then find and press this dial pad button to make it visible. Remember, when you are dialing a number that is outside of your Allworx system, you will need to dial 9 first, just like you do when using your Allworx handset. Then, when you are ready tap Call to place your call. And there you have it! Those were the two ways that you may place calls using the Allworx Reach application. Thank you for viewing! The following First Call training video offers an overview of how to accept incoming calls with the Allworx Reach application, along with how to Transfer Calls Mute Yourself Place Calls on Hold Park Calls Start a 3-Way Conference Call Perform a Call Handoff to a Reach enabled device Below the video, you will find the video's transcript. First Call training video about how to accept incoming calls, along with how to use the call handling options that are available to you. Hi there! Welcome to First Call's training video about how to handle incoming calls using your Allworx Reach Application! In this video, I will show you how incoming calls will be received through the Reach app, how to answer the incoming call and then, I will show you the different functions available to you while on an active call in the app. Please note that this video uses the Allworx Reach 5 application, version 5.4.1.0 on an iOS mobile device. Other versions of Reach will have a slightly different look but will still follow the same general process. Receiving Calls When receiving an incoming call through the Allworx Reach app, your device's screen will change to allow for you to accept or decline the incoming call. Here you see how the screen changes while the device is locked and unlocked. Image from First Call's Incoming Calls & Call Handling training video showing how calls are received on a locked and unlocked device. Swipe or tap to answer or accept the call. On an Android device, the answer or accept buttons will be similar but will have the Android operating system look and feel. Image from First Call's Incoming Calls & Call Handling training video demonstrating how to accept an incoming call from the devices locked and unlocked screen. Here is the active call screen that you will see after you have answered your call. From this screen, you can: Transfer the call, Mute yourself, Place the Call on Hold, Park the Call, Start a conference call, preform a call handoff, and end the call. Transferring a Call To Transfer a call, start by tapping the Transfer button When you tap the Transfer button the caller will be placed on hold while you choose the transfer option that you'd like to use. The Blind Transfer option allows you to transfer a call directly to the recipient, without taking the time to announce the call. The Attended Transfer option gives you an opportunity to announce the call to the recipient before completing the call transfer. The To Voicemail option allows you to transfer the call directly to someone's voicemail. And the To My Cell Phone option allows you the ability to transfer the call to your personal mobile number. If you selected one of the options that allows you to transfer the call to someone else then, you will next have the option to either dial the extension that you'd like to transfer the call to, or you may navigate to the contacts tab to find and select the contact that you wish to transfer the call to. Placing Calls on Hold Tap the hold button to place the caller on hold. You may retrieve the call by pressing the blue phone button, found here on the Phone tab. Parking a Call While on an active call, tap the park button to place the caller on Park. The Reach application will display a pop-up, telling you the extension number that the call was parked at. In this case, the call was parked at 701. To retrieve the parked call, navigate to the Calls tab and then press the green phone, next to the parked call, as pointed out here. Starting a Conference Call In order to start a Conference call, you will first need to be on an active call Then, press the Conference button. And then immediately call the number of the person that you wish to conference into the call. When you place this call, the original caller will be placed on hold. Then, once they answer their phone and are ready to be conferenced into the call, find and press this Merge Calls button to merge these calls together. While on the active Conference call, you may tap the Leave Conference button to exit the call or End to End the call. Call Handoff The Reach app's Call Handoff feature allows you to seamlessly transfer an active call from your Reach app to your handset. The call will have little to no disruption during the call handoff. To perform a call handoff, tap the Handoff button while you are next to your handset. The Reach app will scan for your handset and then transfer the call to your handset once the app locates it. This concludes our training video about how to use the Reach application to handle incoming calls. Thank you for viewing! The following First Call training video offers an overview of how to change your presence setting through the Allworx Reach application. Below the video, you will find the video's transcript. First Call training video about how to change your presence settings through the Allworx Reach application. Hello! Welcome to First Call's training video about how to change your presence settings through the Allworx Reach application. Here's how to change your presence settings through the Allworx Reach 5 application, version 5.1.4.0 on an iOS device. Other versions of Reach may look slightly different but will still follow the same general process. Adjusting your presence setting through the Reach application is quite a simple process! 1. First, open the reach app. From any one of the Reach app pages, here, at the top of your screen, is where you can see your current presence setting. Image from First Calls Presence Settings training video that shows where to find the presence setting in the Allworx Reach application. 2. Tap on the current presence setting to change it. Here you see all of the different presence settings available to you, including Do Not Disturb. Image from First Calls Presence Settings training video that shows the different presences settings available along with Do Not Disturb. 3. Choose the setting that you'd like to change your presence to, in this example, I will choose Away. And let's also set our phone to Do Not Disturb as well. 4. When you are finished, tap Done. Image from First Calls Presence Settings training video that shows how to confirm a change to the presence settings through the Reach application. Here you can see that your current presence setting has changed to Do Not Disturb and Away. Image from First Calls Presence Settings training video that shows the changed presence setting. This concludes our training video about how to change your current presence settings through the Allworx Reach application. Thank you for viewing! The following First Call training video offers an overview of how to voicemails through the Allworx Reach application. Below the video, you will find the video's transcript. First Call training video about how to check new voicemail messages through the Allworx Reach application. Hello! Welcome to First Call's training video about how to manage your Voicemail using the Allworx Reach application. In this video, I will show you how the application notifies you of a new voicemail message, how to listen to that message and some additional actions such as Deleting and Forwarding voicemails. The images in this video are of the Allworx Reach 5 application, version 5.4.1.0, on an iOS device. Other versions of Reach may look slightly different but will still follow the same general process. New Voicemail Notifications If enabled, Allworx will notify you of a new voicemail message with a pop up on your locked screen. Here we see that we have 2 new voicemail messages that need our attention. Image from First Call's Voicemail Messages training video that shows the new voicemail notification that is received while the device is locked. The app may also display a red badge, indicating that there is an activity that you have not yet seen, within the app. Image from First Call's Voicemail Messages training video that shows the red badge on the Allworx Reach app that indicates that there is activity that you have not seen yet. Additionally, within the application, you will see a similar red badge on the voicemail page button. Image from First Call's Voicemail Messages training video that shows the red badge on the voicemail page within the Allworx Reach application, indicating that there is a new, unread voicemail. Open the Reach application and navigate to the voicemail page Here you can see all of your new or saved voicemail messages that are currently in our inbox. In this example, we see two new voicemails. Image from First Call's Voicemail Messages training video that highlights the area in the Allworx Reach app that shows new or saved voicemail messages. There are two ways to play a new voicemail message. The first way you may have already guessed! Tap the green play button that is next to the message you want to hear. Image from First Call's Voicemail Messages training video that shows how to play a voicemail from the Voicemail page within the Allworx Reach app. Tap the red square to stop the message playback. Image from First Call's Voicemail Messages training video that shows how to stop a voicemail from playing on the Voicemail page within the Allworx Reach app. The other way that you can get the message to play, is by tapping on the actual message itself. Image from First Call's Voicemail Messages training video that shows how you may tap on a voicemail on the Voicemail page in order to play the message. This opens a new page where you can listen to the message, along with some other actions. Image from First Call's Voicemail Messages training video that shows the Message page within the Allworx Reach app. From the message page, you can easily call the number back, Forward the message to another extension, Or delete it. Image from First Call's Voicemail Messages training video that shows where to call the number back, forward a voicemail, or delete a voicemail from the Message page in the Allworx Reach app. Alternatively, if we navigate back to the main voicemail page, and swipe left on the message, you will find the buttons where you can mark the message as new, or delete it. Image from First Call's Voicemail Messages training video that shows where to delete or mark a voicemail as new from the Voicemail page in the Allworx Reach app. This concludes our training video about how to manage your voicemail messages from your Allworx Reach application. I hope that this video was helpful to you! Thank you for viewing!
